

DIY CONCRETE WINE BAR

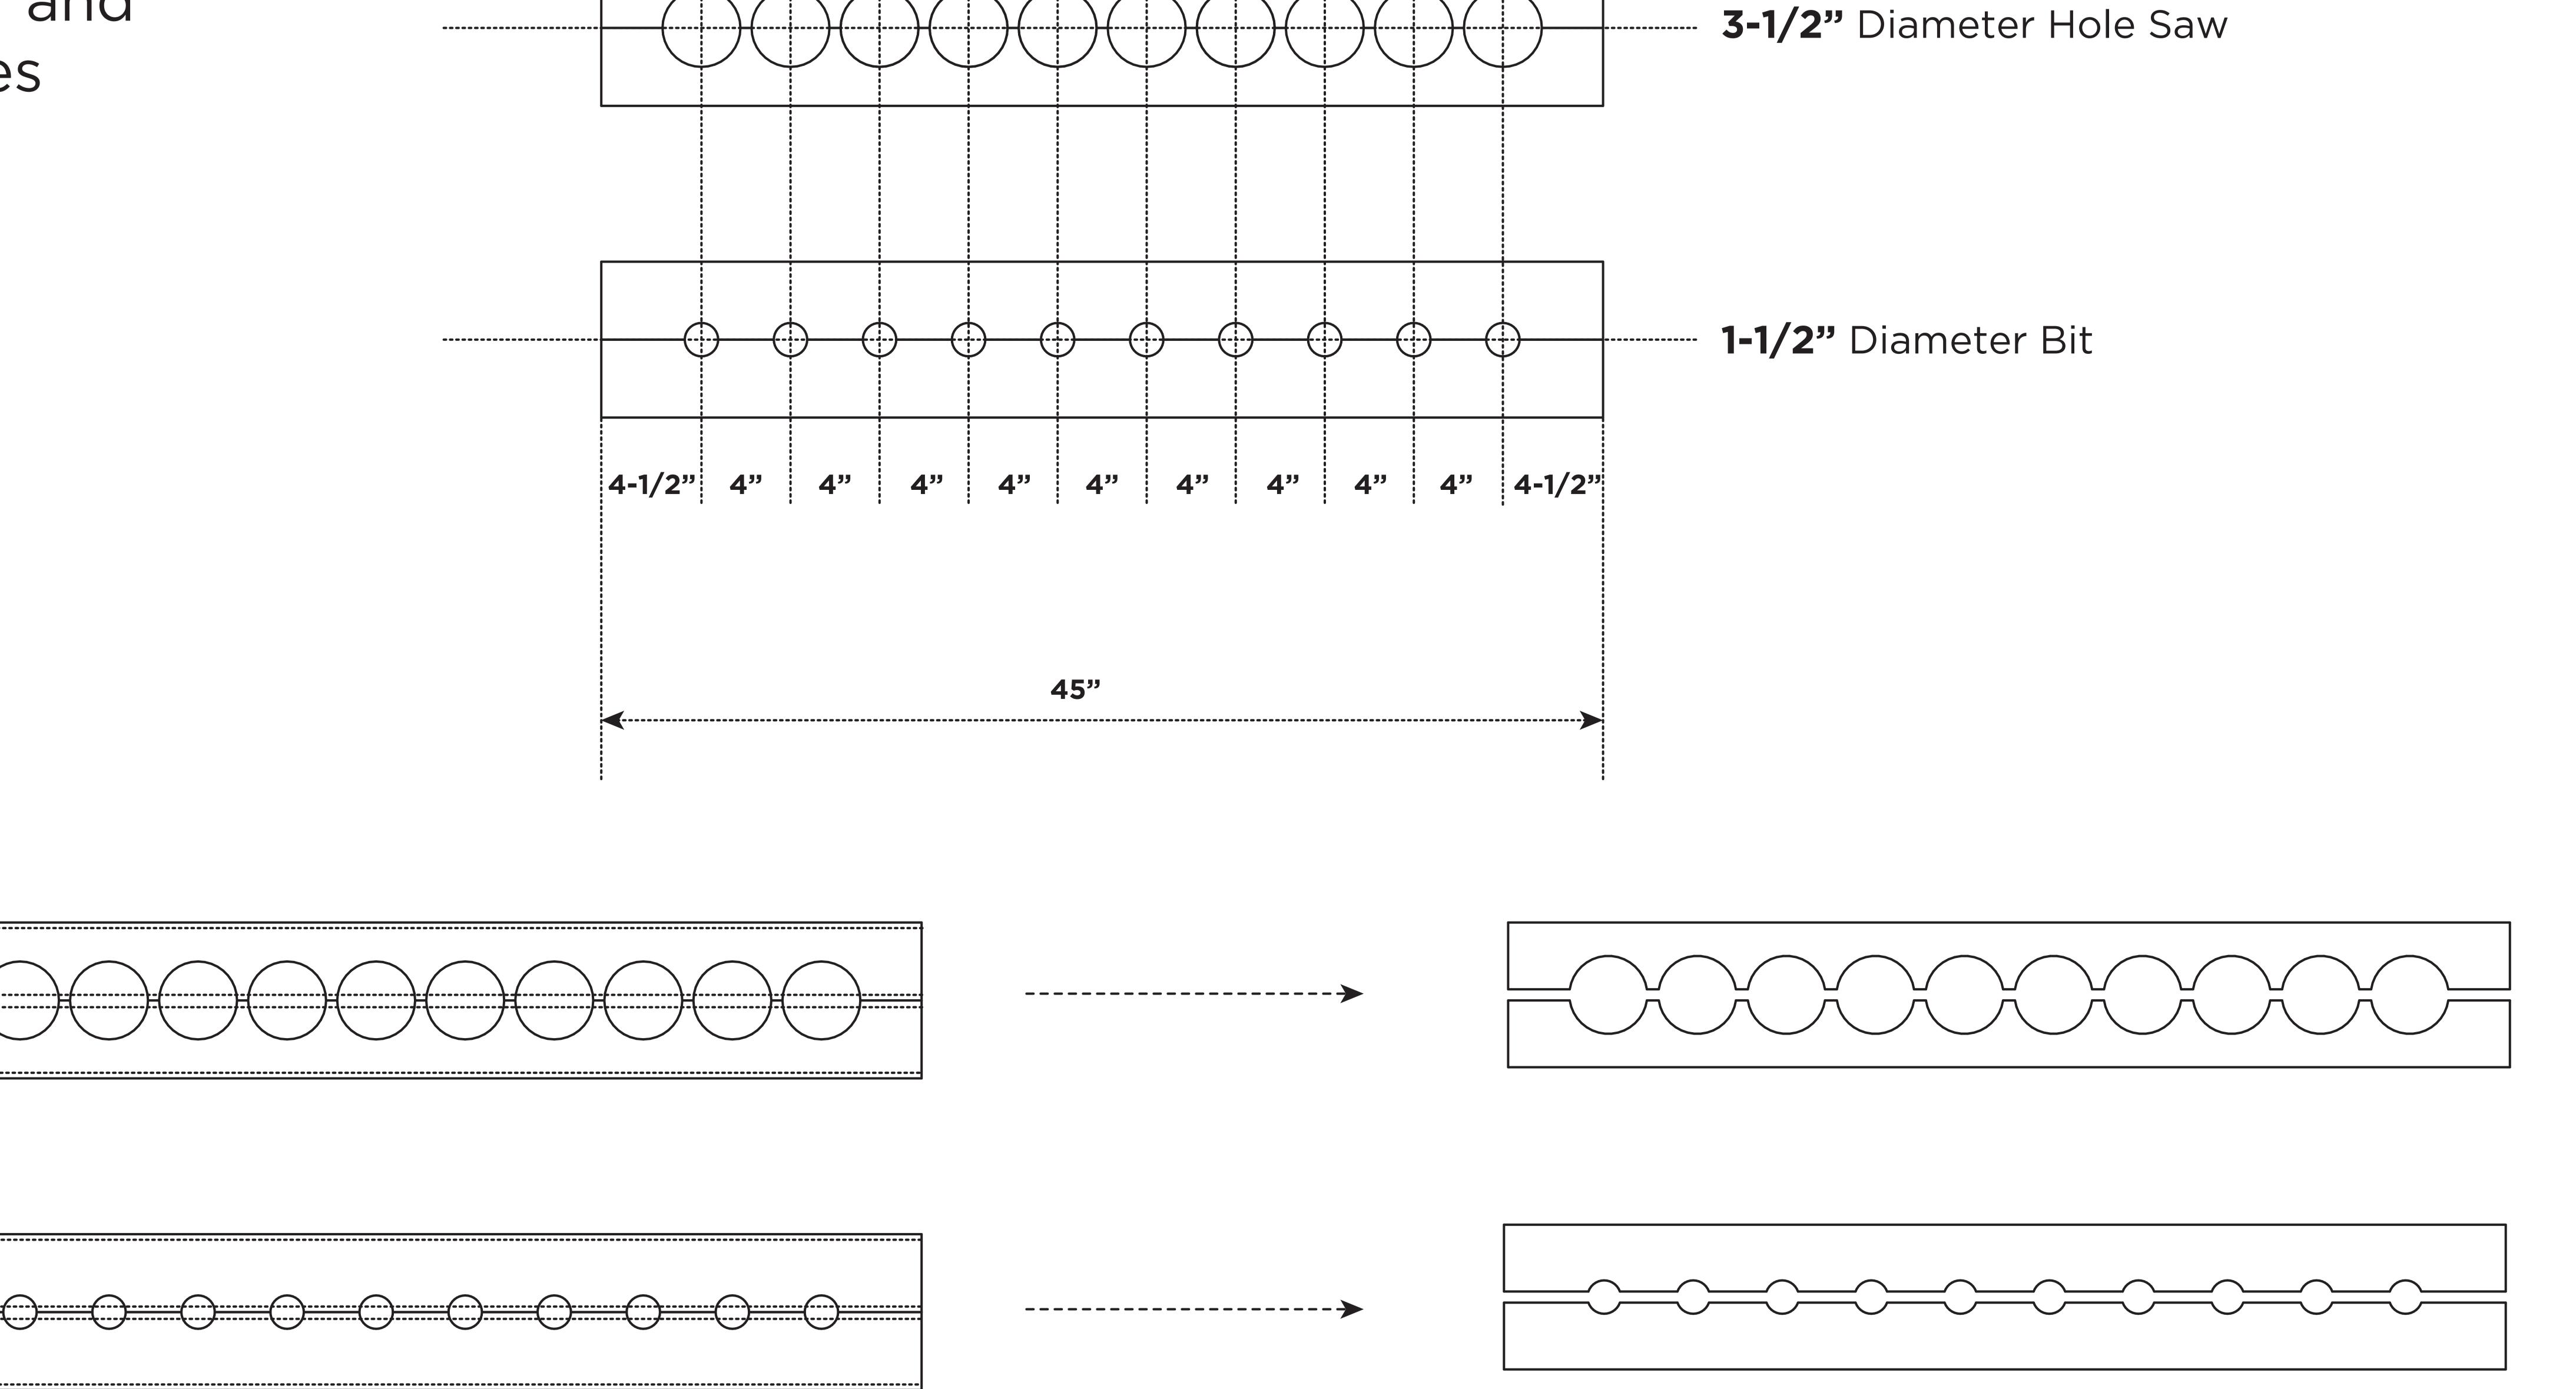

Learn how to make wine bar for your home out of 2x4s and a concrete countertop.

For the wine racks I clamped 2x4s together and

marked center locations before drilling holes between the pieces.

STEP 3. TRIM THE RACKS

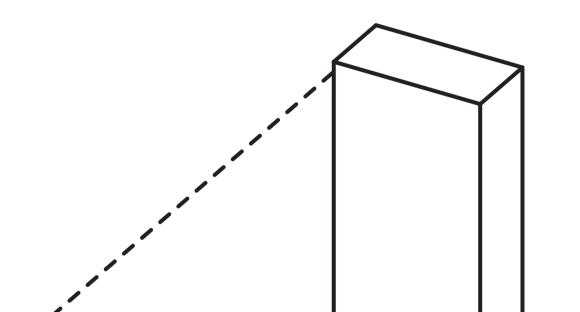

I trimmed off 1/4" of each side of the 2x4s on my table saw.

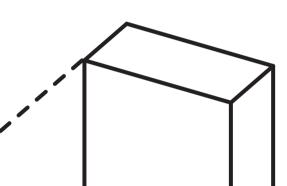

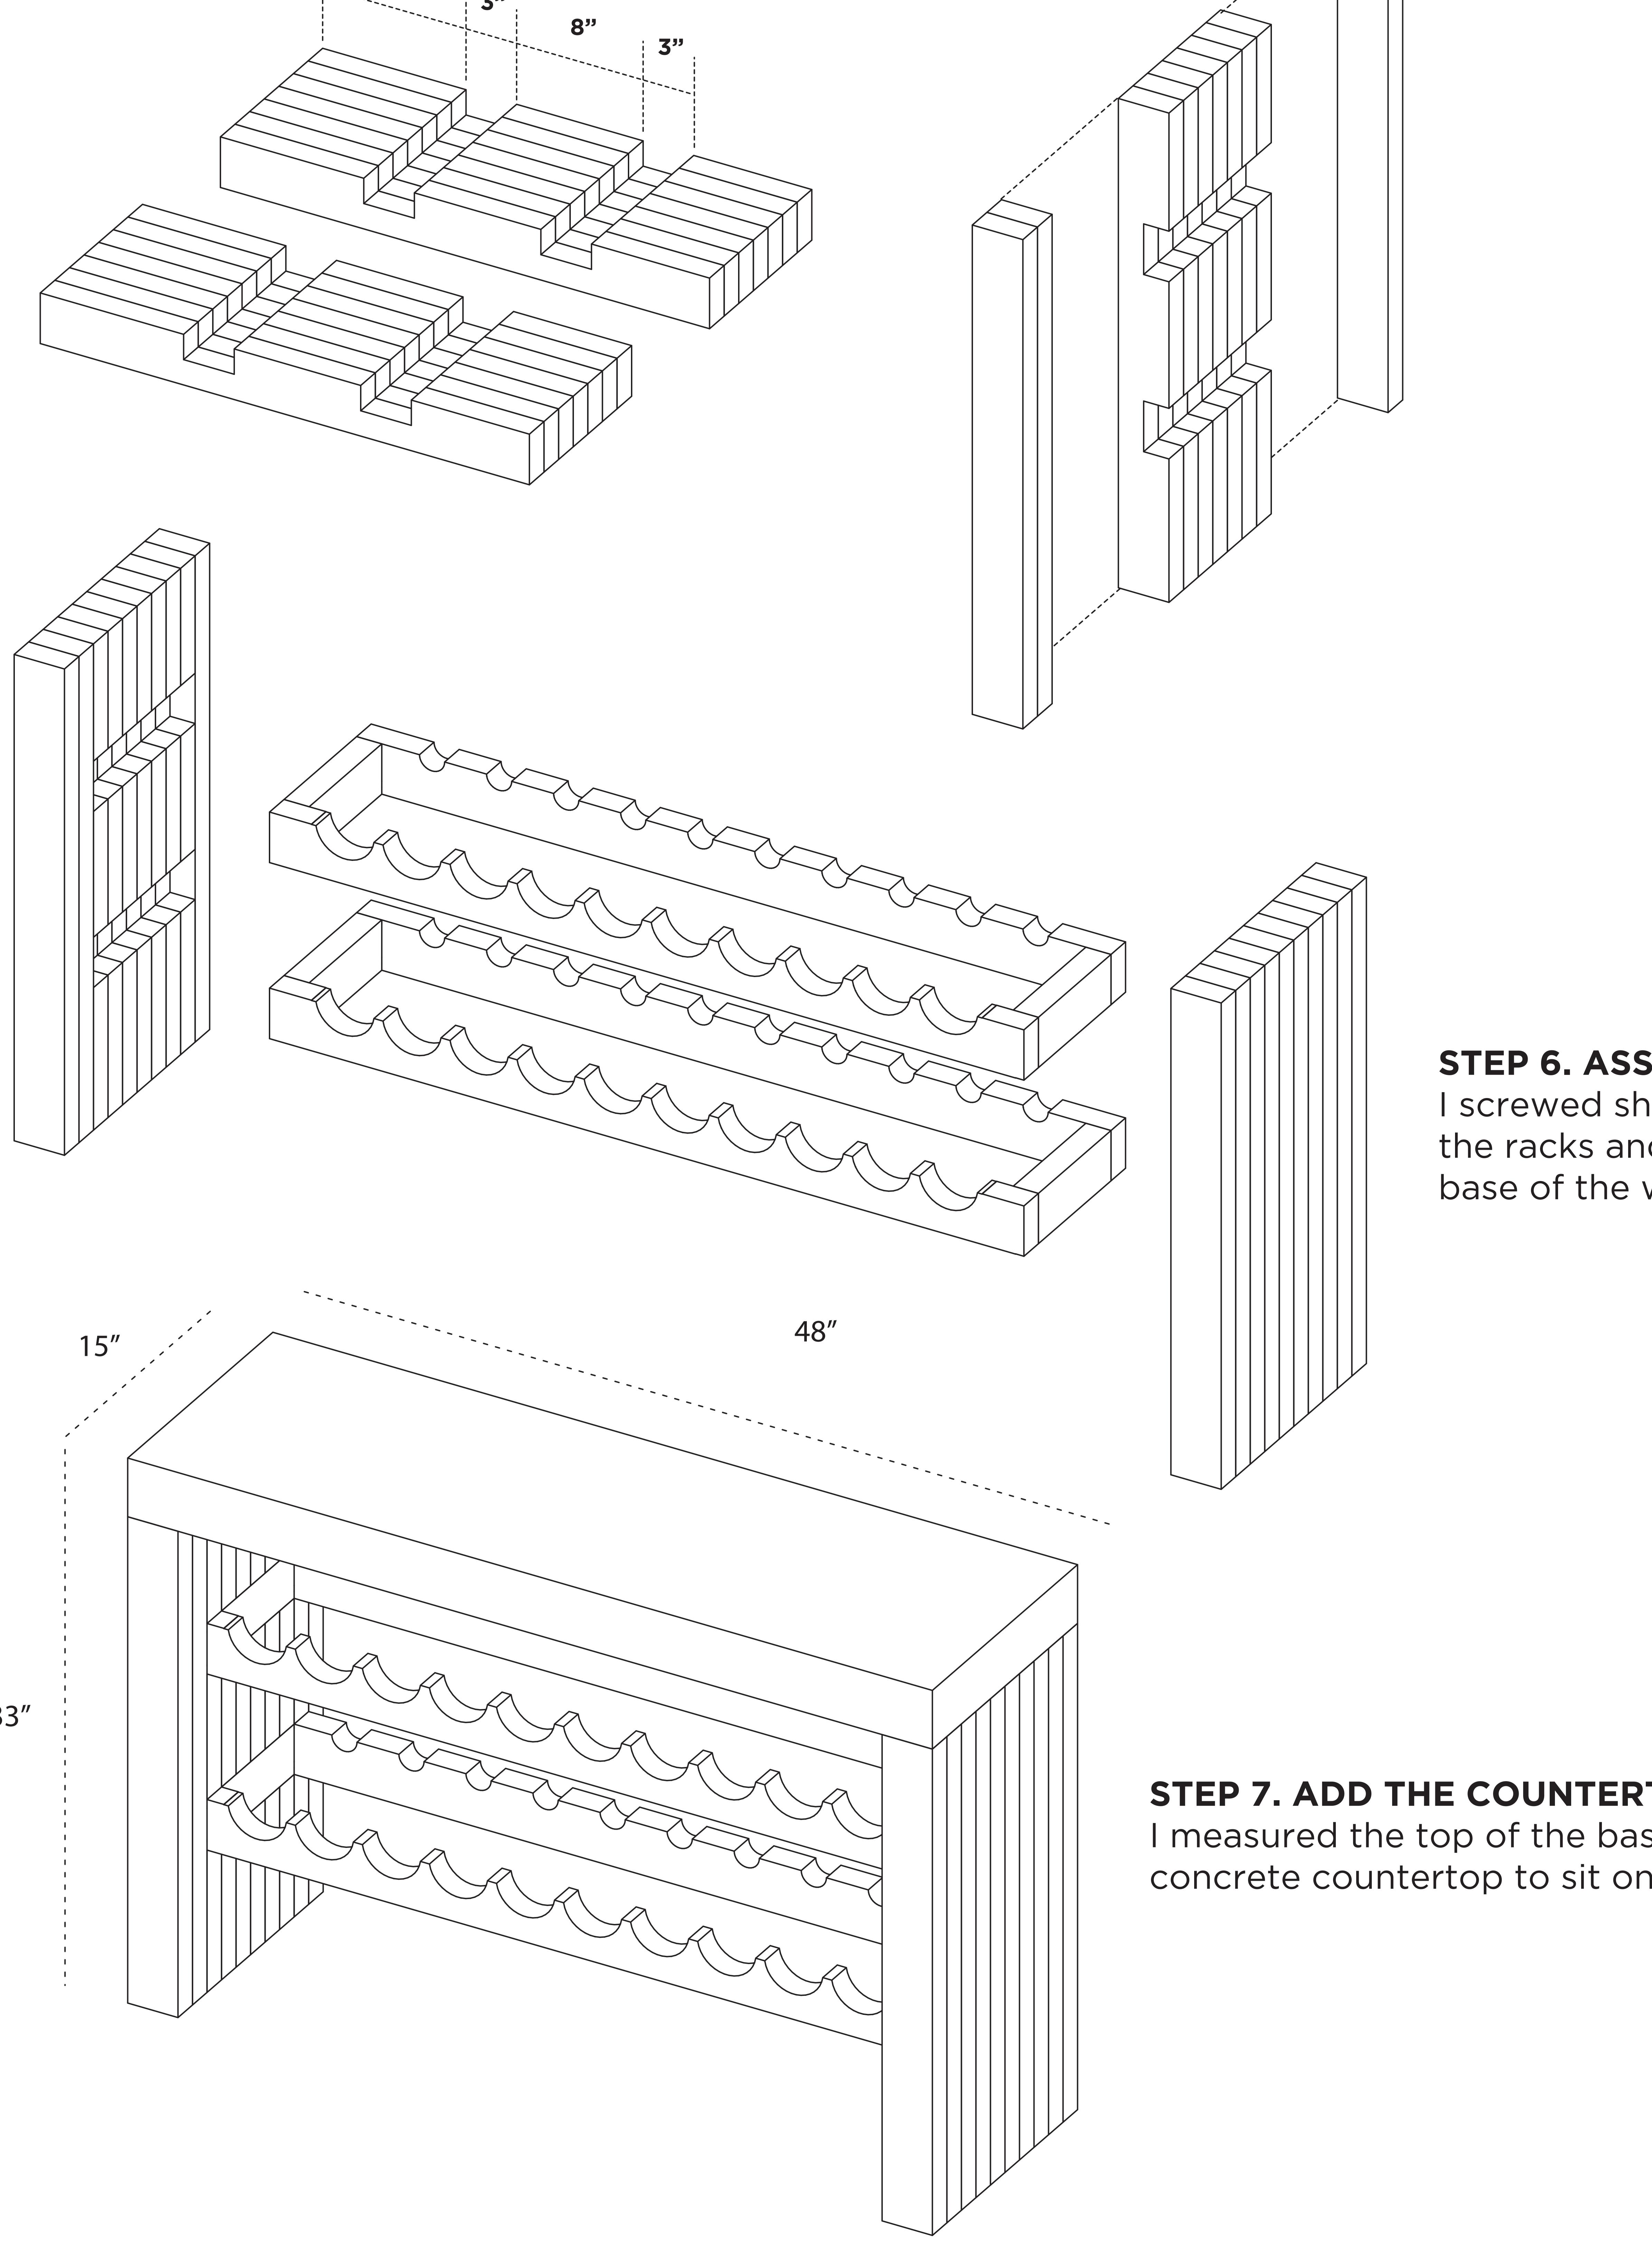

I glued together two panels that are made out of 7 pieces of 2x4 each and then cut grooves in them with my circular saw and a chisel.

STEP 5. FINISH THE PANELS

I glued 3 more pieces of 2x4s onto panels and then sanded them with my orbital sander.

STEP 6. ASSEMBLE THE BASE

I screwed short pieces of 2x4 in between the racks and then assembled the entire base of the wine bar.

STEP 7. ADD THE COUNTERTOP

I measured the top of the base and then made a concrete countertop to sit on top.
